

"The mission of the Millennium@Edu program is to contribute to the advancement in the

Millennium Development Goals through the use of Information, Communication and Scientific Technologies (ICSTs) in Learning and Education while fostering key 21st Century Skills such as critical thinking, problem solving, communication, collaboration and creativity, among others.

The objectives of the Millennium@Edu program are aligned with Microsoft's vision and programs for Education. When governments invest in education technology, it enables the creation of jobs, drives economic growth and increases the country's competitiveness. In the past 3 years, through its Shape the Future program, Microsoft helped 50 countries bring technology access to over 10 million students, educators and families. "
