

“Education is one of the most powerful uses to which broadband connectivity can be put,” said ITU Secretary-General Houlin Zhao. “For the first time in history, mobile broadband gives us the chance to truly bring education to all, regardless of a person’s geographical location, linguistic and cultural frameworks, or ready access to infrastructure like schools and transport. Education will drive entrepreneurship, especially among the young – which is why we must strive harder to get affordable broadband networks in place which can deliver educational opportunities to children and adults,” he said.
