

Mobilizing Broadband Funds for Education

Intel Corporation

Creating Skills and Jobs in a New Economy

Broadband Connectivity along with a quality education go hand-in-hand in developing the Innovation Economy which research believes leads to positive economic growth. So how do we go about ensuring we are providing citizens with connectivity and quality education that prepare them for the future? The goal is to align both industries and governments to develop sustainable programs and also leverage existing resources that can help put funding measures in place.
