SMALL CELL backhaul

small cell backhaul is the transmission links between the network operator's small cell base station and the mobile network operator's core network

Mobile network operators and other connectivity providers avoid rolling out fibre optic transmission infrastructure in unserved and underserved peri-urban areas as it may not be cost-effective due to ...

The Wireless Africa International solution enables the expansion of formal broadband connectivity providers into peri-urban areas on a cost effective basis.

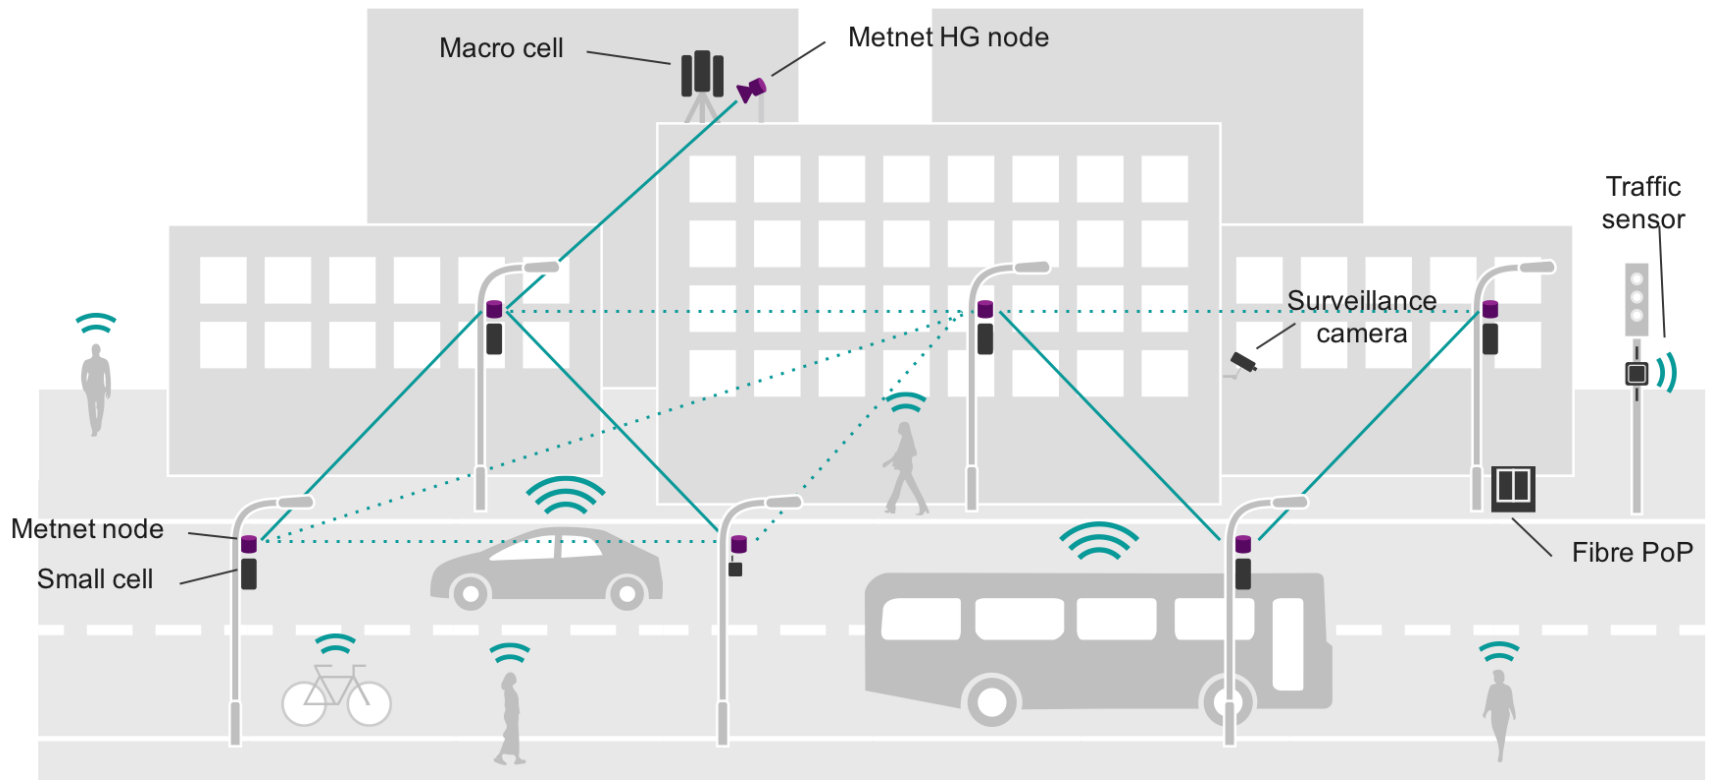

The rollout of the solution requires engagement with local government partners that seek the following benefits for their citizens

Access to Broadband Connectivity and improved communication infrastructure

Access to online resources including government portals and educational resources

Improved security through access to WiFi enabled video surveillance

The unique selling points are

Operator Benefits

- Lower installation and operating costs
- Capital preservation
- Focus on their core business
- Full regulatory compliance
- Full site management and remote monitoring
- Optimal site locations

Supply Chain Considerations

- Innovation in Service Delivery
- Sole provider status or exclusivity term period
- Protection of the innovation and intellectual property

Operator Agnostic

- Represents all mobile companies and tower corporations
- No bias towards any provider

Client Benefits

- Complete End to End solution
- Single Service Provider Interface. One Accountable Party.
